The status of the claims is as follows:

Claims 1-23 (11-23 newly added) are herein addressed below.

Claim 11,13-14, 16 18, 20, and 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 11, 16, 20, and 22, it is not readily understood by the Examiner what is meant by "the first part and the second part are a single component". Does the applicant mean that the first part and second part when attached together forms a "single component"? In claims 13, 14, 18, and 22, the phraseology "twisted" is not readily understood by the Examiner. Specifically, what is meant by "twisted"?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

As best understood, claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Dedrich et al., (5,855,095). As shown in detail below, Dedrich et al., (5,855,095) disclose having a first "twisted"/bent part connected to a guide rail which moves a window pane between an open and closed position, a second "planar" part fixed to the vehicle body (at 18) and having an oblong hole (22) for passage of a fixing member (34), and a bridge fitting (see figure below). Furthermore, since the guide rail is

curved and the window opening and closing path is curved (i.e., guiding direction), then the second part defining a plane and a normal line is substantially perpendicular to the plane and inclined relative to the guiding direction.

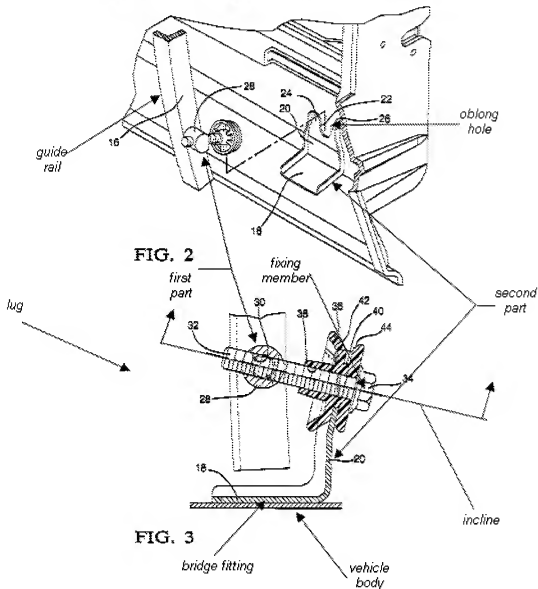

The applicant's argument have been considered but are not deemed persuasive. The applicant argues that claim 1 now clearly defines the normal line is inclined relative to a window guiding direction. As stated in detail above, the window guiding direction is slightly curved so that there are many "normal lines" along the path of the window guiding direction. The applicant further argues that the first and second parts are a "single element" which is not readily understood by the Examiner as stated above. When the first and second parts of Dedrich et al. are attached together, they form a "single component". Still furthermore, the second part of Dedrich et al. is of an L-shape and therefore defines "two planes" and not just a single plane as recited in the applicant's arguments
